Acknowledgements

This thesis has been supported by the Universitat Politècnica de Catalunya and CITCEA through the following projects and other entities:

- EMPOWER Local electricity retail markets for prosumer smart grid power services project. This project received funding from the European Union's Horizon 2020 Research and Innovation programme under Grant Agreement No 646476.
- INVADE Smart system of renewable energy storage based on integrated EVs and batteries to empower mobile, distributed and centralised energy storage in the distribution grid. This project received funding from the European Union's Horizon 2020 Research and Innovation programme under Grant Agreement No 731148.
- BD4OPEM This research is being supported by the European Union's Horizon 2020 Research and Innovation program under the project "Big Data for Open Innovation Energy Marketplace - BD4OPEM" (Grant no. 872525).
- The European Institute of Innovation & Technology (EIT) InnoEnergy Ph.D. School
- Danish Tehcnical University (DTU), Denmark.

Abstract

Storytelling PhD

- What is the current situation?
  - Energy Transition - Clean Energy Package
  - Increase on electricity consumption
  - decomissioning of nuclear power plants
  - Importance on society awareness on sustainability, as well as prices in some countries for access to electricity - What is our current carbon footprint?
- What are the problems that we identify?
  - some of the solutions for the energy transition can lead to congestion in distribution networks, due to the placement of DERs in MV and LV networks.
  - Are we sure that DERs are completely sustainable? Are we really sure that smart grids are completely sustainable, in each and every country?
- Possible solutions
  - Enhance the development of carbon-free technologies by implementing sustainable solutions - Assessment of the environmental impact of electricity production by means of LCA to help in the development of energy policies and planning, as well as including LCA in end-user optimization for achieving lower carbon footprints.
  - Deployment of demand-side flexibility services by means of end-users flexible assets.
- Thesis contributions
  - Assessment tool for evaluating the environmental impact of electricity markets using hourly LCA, by means of Life Cycle Assessment
  - Definition of Flexibility: Characterization, modeling, implementation and evaluation

- Possible use cases of demand-side flexibility: Flexibility services for DSOs.

Resum

Contents

List of Figures

List of Tables

Chapter 1

Introduction

Explicar el problema al qual ens estem adreÃ§ant

1.1 Smart grids

1.1.1 Distributed Energy Resources

1.2 Distribution networks: challenges

1.3 Electricity markets

incloure aquÃ capÃtol del llibre de local and micro power markets? Power market fundamentals

1.4 Regulation framework and new agents in the energy transition

entregable que vam fer amb el pau Plana TFG

1.4.1 Local electricity markets

incloure aquÃ capÃitol del llibre de local and micro power markets? Power market fundamentals

1.5 Sustainability of smart grids and DERs

Explicacio sobre que entenem per sostenibilitat. Quina relacio hi ha entre sostenibilitat i smart grids local markets

1.6 Objectives and scope

1.7 Thesis related work and activities

1.8 Thesis outline

Chapter 2

The Potential Role of Flexibility for Sustainable Energy Transition

2.1 Environmental Assessment of Smart Grids

2.2 LCA Applied on Electricity Production

2.2.1 Peak-Hourly Life Cycle Assessment (PH-LCA) Methodology

2.2.2 Goal and Scope

2.2.3 Life Cycle Inventory

2.2.4 Life Cycle Impact Assessment

2.3 Case Study: INVADE H2020 project Pilot-Sites Electricity Grid Mixes

2.4 Discussion

2.5 Conclusion

Chapter 3

Flexibility Services

3.1 The importance of flexibility

3.2 Regulatory framework for flexibility provision

3.2.1 Flexibility definition

incloure aqui la definicio que vam treballar amb el pau Plana de segons qui vol la flex com es la definicio

3.2.2 Local Flexibility Markets

3.3 Flexibility definition

incloure aqui la idea de diferents definicions de flexibilitat

3.3.1 market oriented

3.3.2 System oriented

3.4 Mathematical formulation for flexibility definition

incloure aqui idea review hussain sobre flexibility review

3.5 Discussion

3.6 Conclusion

Chapter 4

Aggregated Flexibility Forecast

4.1 Introduction

RESEARCH QUESTION: Feina que estic fent a DTU

4.1.1 Use cases/Business models for flexibility services and flexibility forecast

4.1.2 Literature review on flexibility forecast

4.1.3 Contribution

- non-intrusive approach
- less data required (15 kHz for NILM algorithms). Here we can work with 1 minute data
- no submetering (only main smart meter data)
- total aggregated load forecast
- from the total load forecast, we forecast the flexibility UP and flex DOWN, as well as the INFLEXIBLE load
- flexible capacity band (power band) forecast

4.2 Algorithms proposed

- Hidden Markov Model
- combinatorial optimization
- Factorial hidden markov model?

4.3 Methodology

4.3.1 Datasets

Synthetic Data - Load Profile Generator

Real Data - Pecan Street Dataport

4.4 Load Categorization and Flexibility definition

4.4.1 Mathematical formulation

4.4.2 Simulation

4.5 Results

4.6 Discussion

4.7 Conclusions

Chapter 5

OPF for Congestion management in MV distribution networks

5.1 Introduction

RESEARCH QUESTION: INCLOURE FEINA DEL PAPER DEL CIRED

- NUVVE Congestion management
- pilot estabanell INVADE - BD4OPEM
- altres pilots

5.1.1 Use cases/Business models for congestion management

incloure aqui diagrama interaccio de l INVADE-CIRED Possibilitat d incloure els use cases que estem fent pel BD4OPEM

5.1.2 Standards and protocols for flexibility provision between aggregators and DSOs

OPENADR - USEF?

5.1.3 Literature review on congestion management tools - OPF

5.1.4 Contribution

5.2 Mathematical formulation for Flexibility request calculation

- OPF (Python)

5.3 Methodology

5.3.1 Datasets - Network Data

5.3.2 Mathematical formulation

5.3.3 Simulation

5.4 Results

5.5 Discussion

5.6 Conclusions

Chapter 6

Conclusions

6.1 General conclusions

6.2 Contributions

6.3 Future work
